**Ref. 1281**

La fibra di carbonio è un materiale leggero e resistente, ma molto rigido: evitare eccessive sollecitazioni di flessione sulla sonda

While carbon fibre is very light and very strong, it is also quite rigid and therefore excessive flexing should be avoided when using the probe

Bien que le carbone soit léger et très résistant, il est aussi très rigide. Il faut éviter une flexion excessive en utilisant cette sonde

Produkte aus Carbon - Fasern sind sehr leicht und auch sehr stabil. Da sie aber auch sehr steif sind, müssen zu starke Biegebewegungen vermieden werden, die Sonde kann sonst brechen

A pesar de que la fibra de carbono es muy ligera y fuerte, también es muy rígida; y por lo tanto se debería evitar una flexión excesiva cuando se usa la sonda
